

How the Election Was Stolen ...*in a nutshell*

Before the election...

- Decide what the outcome will be for each state
 - Regulated at the county level
- Inflate the registration databases...*which creates a*
 - Credit line of phantom voters (not real, died, moved)
- Program the machines

During the election...

- Databases and machines are hacked and tracked
 - Manipulate votes and voters (to obtain target outcome per county)
 - Regulate county outcomes

After the election...

- Pair last minute voter ID's with phantom voters (phantom voters that were added at the last minute, paired with phantom voters in the registration database)
- Clean up the evidence (clean database so not so obvious)
 - Remove phantom voters (soon after election)

Computer algorithms deployed throughout!
